

Benefits Statement

Total B2B Data Integration

DIcentral provides a complete Internet-based platform of business-to-business (B2B) data integration services for enterprises and e-marketplaces. DIcentral's suite of Internet-based applications, *Total B2B Data Integration*, enables corporations of any size to achieve B2B data integration without the costly investment in localized software and hardware technology, and without the costs of ongoing maintenance and management of B2B relationships.

The Company's platform of solutions offers the most flexible set of B2B integration options available on the market today. DIcentral solutions enable customers with internal enterprise applications such as XML-enabled procurement solutions or EDI to be connected seamlessly with their external trading partners, regardless of what file formats they require.

DIcentral customers simply make a single connection to DIcentral Data Center, and DIcentral translates the data into the standards with business rules preferred by each of their trading partners.

Features and Benefits of DIcentral Solutions:

- *No manual keying of data: you can send data directly from your application to your trading partners with no re-keying of data, which saves time, reduces errors, and improves efficiency and productivity*
- *Access an end-to-end data exchange solution with a single link to DIcentral*
- *No additional hardware or software to buy*
- *Expand the electronic interchange to all of your trading partners*
- *No large upfront investment compared to the traditional EDI solutions*
- *Transaction-based fees that make costs manageable*
- *Monitored and completely secured transactions*
- *World-class, secured, fault-tolerant computing environment at DIcentral*
- *Complete customization: data can be sent or received any format*
- *Data can be viewed and printed from the browser before being imported into an application*
- *Archiving: all transactions are stored online*
- *Reduce annual outlay of e-business costs, including staffing, software and value-added network (VAN) fees*
- *Avoid incremental costs associated with implementing new data exchange standards*

Customer Service

Our services are backed by a professional and experienced staff, including a dedicated customer support team available 24 hours a day, seven days a week. UPS and power generation equipment, redundant telecommunication connections, and fail-over Internet connections support the primary data center.
