

# DItrans™

## Any-to-Any Format Data Translations

### Intelligent Solutions, Accurate Translations

DItrans is DIcentral Corporation's open systems strategy for electronic messaging - the next generation of EDI. Our server provides an intelligent messaging gateway for handling high-volume messaging in a distributed computing environment. DItrans's main purposes are to analyze, translate, and move data to designated areas within and outside the enterprise automatically. This eliminates the need to have expensive personnel constantly monitor the system and perform these tasks manually.

DItrans is certified by the U.S. Department of Defense to provide accurate and strict syntax detection, business rule verification, and data validation.

### Strong Partners, Strong ASP Solutions

DItrans is designated specifically for Application Service Provider (ASP) infrastructure, providing an intelligent data translation gateway for ASP that needs to handle high-volume any format-to-any format data translation. What makes this solid integration and simple implementation possible is DIcentral's strong relationship with our Partners. Our dedicated staff actively participates and collaborates with industry leaders to provide you with high quality e-business solutions for your ERP application.

### Expertise in E-business Integration

Keep in mind, when you are using DIcentral Data Integration Center, DItrans will help you to expand your enterprise application. You can count on DIcentral Corporation to provide you with the most advanced solutions to automate and streamline your entire supply-chain.

For instance, our DIcentral Web Suite Solutions offer you an affordable and secure way to reach your small and occasional Business Partners via the Internet. What's more, we have the services and support you need to get the most out of your B2B data integration.
