

Enterprise Solutions

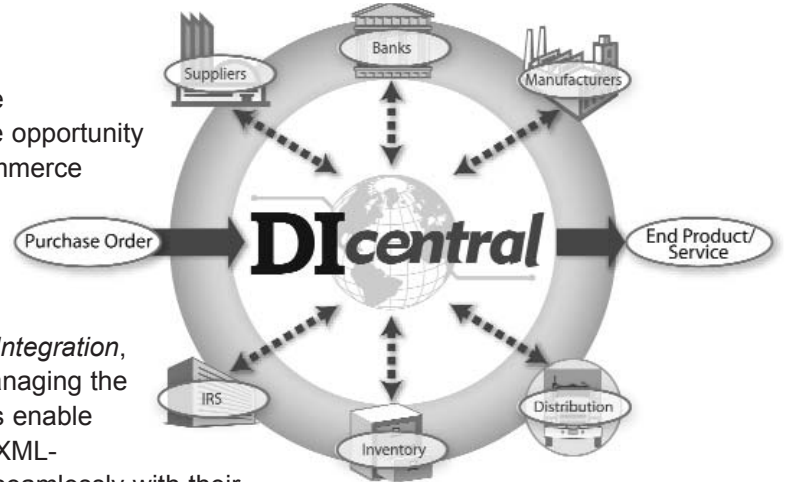

Total Any-to-Any E-commerce

With the emergence of the Internet as a widely available communications infrastructure, companies now have the opportunity to realize new competitive advantages by building e-commerce networks across Business Partners, including suppliers, customers and distributors.

Total B2B Data Integration

DIcentral's solutions, collectively called *Total B2B Data Integration*, are proprietary intellectual property for providing and managing the only hosted B2B integration platform. DIcentral solutions enable customers with internal enterprise applications such as XML-enabled procurement solutions or EDI to be connected seamlessly with their external Business Partners, regardless of what file formats they require.

Enterprises using the downloadable DIconnect to send and receive data benefit from our Open Data Connection, which can be leveraged using commercially available or custom data adaptors. This allows companies to move data in and out of proprietary systems such as CRM, ERP, and Legacy with little or no effort.

Benefits

- extend your current EDI/XML initiative to achieve 100% Business Partner participation
- participate fully in e-markets of choice without the need for unique integration software
- transactions can be sent and received by authorized users via the Internet or standard communication
- no software or hardware to buy
- usable by all sizes of companies and across all industries and business processes

Service Highlights

Our solutions offer enterprises a hosted software service featuring:

- access to an end-to-end Data Exchange solution with a single link to DIcentral
- complete Business Partner outreach and enablement programs
- no additional hardware required
- no large upfront investment compared to the traditional EDI/XML solutions
- transaction-based fees that make costs predictable
- monitored and completely secured transactions
- world-class, secured and fault-tolerant computing environment
- support for all types of transactions and file formats, such as:

Supply Chain	Financial	Ordering	And more...
purchase orders	invoices	requests for quotes	Cataloging...
PO order change requests	payment order	responses to RFQs	Logistics...
